

GIPS TO DEMONSTRATE REAL-TIME HD-VIDEO FOR DESKTOPS AT FALL VON

GIPS, the Voice & Video Engine Leader for VoIP, Announces Demo of Real-Time HD-Video for the Desktop

Boston, FALL VON — October 30, 2007 — Global IP Solutions (GIPS), the leading provider of media processing, announced today that real-time, high-definition (HD) video is now possible on a software platform for desktop users. This capacity will be demonstrated at FALL VON, booth 808.

This will be the first-time a software platform has allowed users to experience real-time, two-way video over a standard broadband connection. Previously only available via standalone hardware and dedicated desktop solutions GIPS applied its industry-leading real-time communications expertise to manage network effects and hardware limitations.

“We are proud to bring this breakthrough technology to desktop users,” said Dr. Roar Hagen, Chief Technology Officer at GIPS. “GIPS real-time HD-video has potential uses for a range of services - everything from online gaming to videoconferencing. The quality and dependability of GIPS real-time HD-video can vastly improve communication in today’s global business environment, while allowing end-users to experience a superior level of quality real-time communications.”

There will be live demonstrations throughout Fall VON at GIPS booth.

About Global IP Solutions

Global IP Solutions (GIPS) provides best-in-class voice and video in end-to-end IP communications with robustness against packet loss for service providers, enterprises, applications developers, network equipment, gateway and chip manufacturers. GIPS’ customer list include Nortel, Oracle, Samsung, WebEx, Yahoo!, AOL, EarthLink and other key players in the VoIP market. GIPS is a member of the Intel® PCA Developer Network, Motorola Design Alliance, Symbian Platinum Partner Program and Texas Instruments’ third party developer network. GIPS is headquartered in San Francisco with offices in Stockholm, Boston and Hong Kong. More information at www.gipscorp.com
